COURSES TAUGHT

Theatrical Lighting Design

Students will explore the use and control of the qualities and properties of light to direct attention, convey mood and create sense of place. These skills will be developed through performance projects and lab work to further the student's abilities to use light to help interpret the script and realize the director's vision. Verbal, written and visual communication of ideas is emphasized and practiced. Collaboration with the director and other members of the design team is developed as part of the design process.

Concert Lighting Design

Students will explore lighting design in genres that use automated fixtures as their primary lighting tool and concentrate on a design for a concert touring project. The course covers how to efficiently convey intent and design ideas to a lighting programmer. Content includes attention to efficient time management of the lighting designer's work.

Dance Lighting Design

Students will explore the art of dance, its historical roots and the relationship between movement, space and light. The process of dance lighting will include translating abstract ideas into visual images, exploring the properties of light in context to movement and how to communicate with the choreographer. Students from this class will go on to design lighting for the spring semester Dance Light Concert.

Lighting Design Skills

Students will concentrate on developing the skills necessary for lighting designers to successfully implement their designs. The course covers both how to use an assistant and to perform successfully in assistant roles. Content includes work on communication skills, focusing and cueing skills, a brief review of plot and paperwork, and the expectations and responsibilities of the design assistant.

Intro to Lighting Design

Students explore the physical properties of light in various design applications and develop a process of storytelling that involves analysis, research, exploration, questioning, problem solving and implementation of a successful design product. Students will also learn how to collaborate as a design team with the director.

Television Lighting Design

This mini is to help prepare students for the Television Lighting Workshop. Prominent professional designers from the television and live broadcast industry in Los Angeles and New York come in to mentor the students through a produced television experience. Teams of student writers, directors, actors and designers collaborate on a script that is produced in the Wells Video Studio. Lighting students gain an understanding of how to light for camera and what opportunities exist for a career in this field.

Theatrical and Opera Lighting Design

Students will continue to explore the properties of light to direct attention, convey mood and create sense of place. Students will apply their design skills to music based texts alternating years between musical theater and opera. Scale of space and complexity of cueing will be explored. Verbal, written and visual communication of ideas is emphasized and practiced.

Architectural Lighting Design

Through hands on exploration of light and the technical tools used to express a design idea, students will develop a design process for lighting people and architecture. Emphasis is placed on understanding the client's needs, creating a strong design point of view and developing communication skills. As part of being globally responsible, students will focus on green design. The students' design work is realized in lighting mock-ups with community based projects in Pittsburgh.

Lighting Design Thesis

This course is only open to graduate students in the MFA lighting design program. Individual students are mentored and prepared for a professional career in lighting design. Emphasis is on the Design Thesis Project and portfolio.

Interaction & Expression Using the Pausch Bridge Lighting

Students form teams across disciplines to develop and implement a lighting idea for the Pausch Bridge that explores light as a visual expression of art. Students explore light as narrative, learn to translate abstract concepts into specific images of light, understand how time and motion can influence the meaning of a visual message and engage participants in an interactive experience.

CURRICULUM DEVELOPMENT

Created an MFA program in Lighting Design at Carnegie Mellon University and expanded the BFA Lighting curriculum. Classes for the BFA and MFA degrees include courses that integrate practical and theoretical experience in lighting design for theatre, opera, dance, industrials, concerts, architecture, and television.

Created a lighting design course for the Higher Institute of Architectural Sciences Henry van de Velde in Antwerp, Belgium. This is the first lighting design course in Belgium. Class projects include the lighting of the exterior façade of the Royal Museum of Arts which was accepted by the city and installed in September 2006.

Worked with faculty in CFA to create a pilot program for international multidisciplinary study. Sites have included Barcelona in 2000 and Rome in 2001 and 2002. The curriculum focused on the study of time, space, sound, color and light within the environment and also included an introduction to the arts using the resources of the country's culture.

Worked with faculty in CFA to create a model study abroad program for interdisciplinary fine arts study in Tours, France. Curriculum combined language, culture and specific fine arts disciplines within a studio/fieldtrip/internship environment.

Created a collaborative summer theatre experience for Carnegie Mellon Drama students with the Central School of Speech and Drama in London, England.

NATIONAL CONFERENCE PANELS:

“Mentoring the Young Lighting Designer,” Toronto, March 2005

“Color and Light” New Orleans, February 2002, Joe Tawil, Chair

This panel discussed collaboration between directors and lighting designers in developing a color palette. Participants included Beverly Emmons, Cindy Limauro and Stephen Rothman.

“Skills Building: Early Director Communication” Toronto, March 1999

This session focused on my techniques for early communication with directors and choreographers. Discussion included tools of communication, how to develop a common visual language, building trust and mutual respect and identifying key check-points in the process. A director and a choreographer then presented their approach.

Reviewer of Student Design Portfolios, USITT, 1996-1999

As part of my commitment to mentoring students I critiqued portfolios of students across the country in an effort to better prepare them professionally.

“Light Lab: A Critique of Student Lighting for The Tempest” with Cindy Limauro and Tony Award designers Neil Peter Jampolis and Chris Parry, Long Beach, March 1998

Several students from across the country had the opportunity to present their design work live and receive critiques from three of the finest educational and professional lighting designers.

“Imero Fiorentino: Distinguished Designer Series,” Cindy Limauro, Chair, Pittsburgh, March 1997

I established this ongoing series for USITT’s annual conference as a way of providing an in-depth look into the lifetime careers of distinguished lighting designers for

educators, students, and other professionals. Participants have included Tom Skelton, Jennifer Tipton, Abe Feder, Ken Billington and Jules Fisher.

“Light Lab: A Critique of Student Lighting for Dance” with Cindy Limauro, Chris Parry and Ann Archbold, Fort Worth, March 1996

Several students from across the country had the opportunity to present their design work live and receive critiques from three major professional lighting designers.

“Jules Fisher: Distinguished Designer Series,” Cindy Limauro, Chair, Las Vegas, March 1995

“Design Theory and Aesthetics” Las Vegas, March 1995

I presented my philosophical design approach and discussed changes of style as it applied to lighting theatre, dance and opera.

Reviewer for the Young Designer’s Forum, Nashville, April 1994

This was a design exhibition in which I participated as a reviewer of student work.

“Designing with Automated Fixtures” with Jim Moody, Cindy Limauro, Chair, Nashville, April 1994

This was an all day hands-on practical seminar learning to design and program VL 4’s, a new state of the art automated lighting fixture by Vari-lite. Demonstrations also included use with computer lighting consoles by Colortran, ETC and Strand. Discussion involved the history, technical vocabulary, programming capabilities and design innovations.

“Abe Feder: Distinguished Designers Series,” Cindy Limauro, Chair, Wichita, March 1993

Special Exhibit “Finnish Lighting Installation: Shadow Takes a Walk,” Cindy Limauro, Chair, Wichita, March 1993

“Opera Design” with Gil Wechsler, Neil Peter Jampolis, Dawn Chiang, Cindy Limauro, Chair, Seattle, March 1992

This session presented an in-depth look at modern opera design featuring the Metropolitan Opera, New York City Opera, Washington D.C. Opera and the Seattle Opera. Discussion centered on repertory companies vs. non-repertory companies and the impact this has on lighting design.

“Dance Lighting” with Tony Award designer Jennifer Tipton, Cindy Limauro, Chair, USITT, Boston, February 1991

This was a practical demonstration of a dance lighting rep plot and the actual design process of lighting a new piece performed by a contemporary company of dancers. Discussions included technique, philosophy and collaboration with the choreographer.

“Video Lighting” with Jim Moody, Cindy Limauro, Chair, Milwaukee, April 1990

An all day hands-on practical seminar that included discussion of video equipment and the different types of cameras used, techniques of video lighting, use of color media and adapting theatrical lighting for video.

“Practical Teaching Demonstration of Light Lab Exercises” Calgary, Canada, April 1989

Two designers and myself demonstrated our approach to the teaching of lighting design. Using a light lab equipped with a repertory light plot and a group of students, each designer taught a mini class using a particular design exercise. The audience was able to observe the critique process of student work followed by a discussion of the learning process.

“Memory Lighting Boards: A dialogue between designers and electricians,” Anaheim, March 1988

This panel demonstrated the language differences between several memory lighting boards in an attempt to develop a common language for use between designers and electricians with any type of computerized control console. Two lighting designers including myself prepared a sequence of cues to be programmed by electricians into four separate light boards with an overhead video projection of each for the audience. This panel also provided input to theatre manufacturers about future console designs based on the ideas of lighting designers and electricians who use the equipment.

“Movement in Light: Design Applications for Automated Fixtures in Today’s Theatre,” USITT Ohio Conference in Cleveland, October 1987

I participated in a demonstration of automated spotlight systems and a discussion of the use of these systems by professional lighting designers and their future impact on the art of stage lighting.

“Freelancing for Designers and Technicians,” USITT Ohio Conference, April 1986

This panel was an investigation into the problems and logistics of freelancing in design and technology. I primarily focused on the problems of freelancing in both amateur and professional fields.

“The Training of Lighting Designers,” USITT Ohio Conference, October 1985

Along with other educators I discussed the teaching of basic lighting design from conceptualization, style, sensitivity, to training for the union exam. Panelists shared their styles of presentation, class exercises and methodology. Syllabi, projects and material handouts were provided.

“Technical Production and Lighting for Touring Shows,” USITT, Ohio Conference October 1984

This panel addressed the problems and advance planning necessary for touring productions. Panelists including myself shared our experiences and solutions from the viewpoint of the lighting designer, stage manager and technical director.

HELSINKI INSTITUTE OF THEATRE:

Guest Lectures on Lighting Design, May 1991

The Theatre Academy of Finland invited me to be a guest lecturer at an international seminar they were hosting. The topics I addressed were: use of automated lighting fixtures and advanced technology and its impact on the artistry of design; correlation between a theatre space and the type of theatre (drama, dance, opera) from a lighting design viewpoint; the crossover between theatrical lighting design and architectural and industrial lighting design; and educating lighting designers for the future.

AMERICAN THEATRE ASSOCIATION NATIONAL CONFERENCE:

“Find the Light: Integration of Lighting Design into Actor Training Programs,” Toronto, August 1985

The team teaching concept which this panel addressed began as an experiment in my classes to give lighting students practical experience while forcing the acting student to improvise their material to make maximum use of the stage space.

The first project used the presentation of a “four-points” movement exercise and a Brecht monologue in separate events. The actors were asked to deliver the monologue while finding the light on stage as it changed spontaneously. Conversely, the designer was asked to develop a spontaneous design for actor work they had never seen before while the “four-point” movement position was performed. The value gained by the actor extended the actor’s ability to find motivation and levels in the work. The designer extended theoretical principles to practical application and both the designer and actor gained a greater respect for each other’s ability to influence the other’s work. The dialogue that resulted bridged a gap commonly felt between performance and design artists.

The idea of performance/design team teaching has extended into the directing classes and experimental acting classes involving mood/emotion exploration. The team is exploring the possibility of a curriculum that integrates all creative projects in performance and lighting design, thus, leading to an educational environment that stresses practical application from a theoretical base as opposed to classroom work remaining exclusively at the level of theory. None of the work becomes necessarily “product”—it is rather, the experimental application of ideas arriving out of a classroom. This team approach has created a dynamic environment for learning and educating and allows for the extension of both performance and design into respect for the total theatrical ensemble.
